

Quote Generator Website

Problem Statement:

The Quote Generator App is a neat project that uses the basics of web: HTML, CSS, and JavaScript. With HTML, we set up where everything goes, like the spot for the quote and the button to get a new one. CSS makes everything look good, with a clean style that's easy to read and works on phones, tablets, and computers. JavaScript is the magic that makes everything work. When you click the Generate button, JavaScript asks the [quotable.io](#) API for a new quote and author and then shows it to you without having to refresh the page.
